DEVELOPMENT AND PROJECT MANAGERS
PROPERTY ADVISORS
URBAN AND ENVIRONMENTAL PLANNERS

About Foresite:

Foresite is a highly specialised property, development and planning consultancy that has provided a range of project delivery services since 1991.

We take pride in working with our clients to understand their requirements and then in partnership, we develop and deliver innovative project outcomes.

This strategic thinking ensures successful outcomes that are environmentally aware and will meet with favourable stakeholder, community and market acceptance.

If we can be of assistance with any of your projects, please do not hesitate to contact us.

We encourage you to view our website at www.foresite.net.au to find out more about our company, services and projects.

File me for future reference!

Urban Regeneration

Over the past decade, there has been increased emphasis within the development industry towards urban consolidation and renewal. Specialist skills are needed to proactively optimise land use potential, efficiently utilise existing community and servicing infrastructure, and minimise environmental and heritage impacts. At the same time there is now increasing need to introduce and integrate new sustainable development solutions that are practical and affordable.

The Melbourne 2030 Strategy demonstrates the state government's commitment to this process. Local government is following with the preparation of structure plans which have environmentally sustainable development outcomes as the key focus.

Foresite has extensive experience in providing tailored consultancy services that deliver innovative development solutions for urban renewal or regeneration projects.

Our core consultancy services include: scoping appraisals, strategic planning assessments, detailed site assessment management, urban and development economics, feasibility appraisals, development and master planning, comprehensive development management and project delivery.

All our services are undertaken having regard to environmentally sustainable development, client strategic business planning requirements and project feasibility appraisal.
